

ETL Process Flowchart – Retail Sales BI

This diagram summarises the Extract → Transform → Load steps implemented in the Python scripts.

EXTRACT	TRANSFORM	LOAD
Read raw CSVs (FOLDER_4_Data_Examples)	Clean + standardise Derive revenue, year, month Output transformed CSVs	Insert into SQLite DB (FOLDER_1_Database/retail_sales.db) Validate FKs

Execution order: 1) extract_data.py 2) transform_data.py 3) load_data.py
